MCQ: Overall good answers, some errors but not persistent problems that need to be flagged.

B1: Good answers, no issues.

B2: Several attempts missed an answer to the "why" of the first question.

B3: Overall ok, occasional errors with formulas/definitions.

B4: Several answers mixed the notion of consistency model with rules related to process execution.

B5: Only few answers realized that finding three locations out of ten can easily be solved by exhaustive search assuming some criterion for optimization.

B6: Generally good answers.

B7: Overall ok but several answers did not realize that ACID transactions have specific characteristics but would not really affect read-only operations.
