Aims and intended learning outcomes

Software systems are at the heart of all successful modern businesses. These systems are complex and long-lived, and must be robust and adaptable. Our Software Engineering programmes emphasise a study of software design and production techniques, and equip you with the skills needed to follow a career specifying and developing such systems. Software engineering techniques consider the whole life cycle of an application, from its specification and design, through its implementation and testing, to its maintenance and adaptation.

Our Bachelors programmes aim to:

1) enable graduates to exhibit a high level of practical and theoretical skills over a broad range of Computer Science together with a knowledge of currently available techniques and technologies.

2) explore the principles that support developments in a rapidly changing subject.

3) provide opportunities for students to understand the wide range of research challenges facing Computer Science, as well as the breadth and depth of research undertaken in this top-rated school, so they are prepared to embark on research here or elsewhere.

4) develop competent professionals able to play a leading part in many different commercial, industrial and academic activities and adapt rapidly to changing technology.

5) meet industry demand for high calibre graduates who will take a lead in continuing technological change.

6) prepare students for the social, organisational and professional context in which they will be working.

7) meet the educational requirements of the Engineering Council, as outlined in UK-SPEC, thus enabling graduates to progress to professional membership of the BCS and IET and attain the highest professional status of Chartered Engineer.

In addition to the aims of the Bachelors programmes, our MEng programmes aim to enhance the skills and achievements developed in the Bachelors programmes in a number of ways:

1) All MEng students spend a period working in industry with the option to extend this to a complete year. This gives them experience of developing design solutions in the presence of critical constraints and evaluating their success in an industrial context, while interacting with other project stakeholders. They also further develop their communication and presentation skills.

2) By following a number of postgraduate level course units, they broaden and develop their theoretical and technological capabilities beyond those attained at Bachelor's level to equip them for the analysis and solution of Computer Science problems.

3) The level 4 Business Feasibility Study course unit (MCEL40042) emphasises industrial relevance through industrially-related group projects. Each student team works on a typical business brief supplied by a real client and explores how to utilise their subject specialism, together with business and management tools and techniques, to identify ways in which value may be created for the client/stakeholders. Students gain experience of legal and regulatory frameworks and professional codes of practice.

Intended learning outcomes (UG)

Knowledge & understanding

A1 ☑ Know and understand the essential mathematics relevant to computer science.

A2 ☑ Understand and apply a wide range of principles and tools available to the software engineer, such as design methodologies, choice of algorithm, language, software libraries and user interface techniques

A3 ☑ Demonstrate a grasp of the principles of computer systems, including architecture, networks and communication

A4 ☑ Recognise and appreciate the professional and ethical responsibilities of the practising computer professional, including understanding the need for quality

A5 ☑ Know and understand the principles and techniques of a number of application areas informed by the research directions of the subject, such as artificial intelligence, databases and computer graphics

A6 ☑ Apply their knowledge of computing in a commercial or industrial context

A7 ☑ Show a critical understanding of the broad context within which Computer Science resides, including issues such as quality, reliability, enterprise, employment law, accounting and health
and safety

A8 Have a comprehensive knowledge and critical awareness of selected specialist fields at the forefront of computer science, studied at masters level

Intellectual (thinking) skills
B1 Solve a wide range of problems related to the analysis, design and construction of computer systems.
B2 Design and implement a software or hardware system of significant size
B3 Identify a range of solutions and critically evaluate and justify proposed design solutions
B4 Solve computer science problems with pressing commercial or industrial constraints
B5 Generate an innovative design to solve a problem containing a range of commercial and industrial constraints

Practical skills
C1 Plan and undertake a major individual project
C2 Prepare and deliver coherent and structured verbal and written technical reports
C3 Give technical presentations suitable for the time, place and audience
C4 Use the scientific literature effectively and make discriminating use of Web resources
C5 Design, write and debug computer programs in appropriate languages
C6 Use appropriate computer-based design support tools
C7 Apply computer science skills in a commercial or industrial environment
C8 Demonstrate initiative taking, innovation and self-management in an industrially related group project
C9 Integrate previously acquired skills and apply them to new, demanding situations

Transferable skills
D1 Display an integrated approach to the deployment of communication skills
D2 Use IT skills and display mature computer literacy
D3 Work effectively with and for others
D4 Strike the balance between self-reliance and seeking help when necessary in new situations
D5 Display personal responsibility by working to multiple deadlines in complex activities
D6 Employ discrete and continuous mathematical skills as appropriate
D7 Demonstrate significantly enhanced group working abilities
D8 Further develop career plans and personal objectives
D9 Communicate effectively with non-specialist as well as computer scientist professionals at a range of levels
D10 Undertake a range of technical roles within a team and be able to display leadership

Intended learning outcomes (PG)
Knowledge and Understanding
A1 (At all levels) Acquire a knowledge of a range of advanced topics in Computer Science beyond undergraduate level and at the forefront of research

A2 (At all levels) Understand, apply and develop leading-edge technologies in two of the following themes: Advanced Web Technologies, Computational Biology, Concurrency, Data Management, Health Informatics, Learning from Data, Logic and Automated Reasoning, Management, Mobile Computing, Text Mining, Security, Software Engineering, Visual Computing

A3 (MSc & PG Diploma) Have a knowledge & understanding of research methodology & practice

Intellectual Skills
B1 (PG) Develop and evaluate original ideas in a research context (MSc and PG Diploma levels only)

B2 (PG) Use methodologies for development of computational systems at an advanced level (All)

B3 (PG) Perform problem-solving in academic and industrial environments (All)

Practical Skills
C1 (PG) Develop applications to satisfy given requirements

C2 (PG) Organise & pursue a scientific or industrial research project (MSc and PG Diploma only)

C3 (PG) Use, manipulate and develop large computational systems

C4 (PG) Perform independent information acquisition and management

Transferable Skills and Personal Qualities
D1 (PG) Work and communicate effectively as a team member

D2 (PG) Prepare and present seminars to a professional standard (MSc level only)

D3 (PG) Understand ethical issues related to professional activities

D4 (PG) Write theses and reports to a professional standard (MSc and PG Diploma)

D5 (PG) Perform independent and efficient time-management

Generic reference to outcome group
G1 (PG) Knowledge and Understanding

G2 (PG) Intellectual Skills

G3 (PG) Practical Skills

G4 (PG) Transferable Skills and Personal Qualities

G5 (PG) Not specified
Teaching, learning and assessment methods

Learning and Teaching on all our programmes aims to combine an understanding of fundamental CS principles, development of strong practical skills and the group-working, learning and communication skills that are essential for any computing professional.

Course units which involve practical elements all have associated laboratory exercises, usually in timetabled sessions with staff and demonstrator support. Most labs operate a system of face-to-face marking in the lab so that students receive immediate feedback on their work. Units without labs all have regular coursework exercises to support skills development and feedback.

Most units are lecture based, with lab or coursework exercises used to reinforce and enhance knowledge and skills first encountered in lectures. The first year team project deviates significantly from this model and takes an Enquiry Based Learning approach. This unit aims to encourage students to be more actively engaged with, and responsible for, their own learning, to develop skills in problem solving, communication, independent learning, and group work, and to signal the importance we attach to independent learning. This approach is followed up in the second year with the workshop based approach used in the compulsory Software Engineering unit, which also contains a major group working component.

The choice of units offered to students on our programmes is very broad, but they also require depth in particular subject areas. This is achieved using the notion of Themes. A theme is a group of related second and third year course units which form a coherent whole; usually one second year and two third year units. All single honours students are required to complete at least two themes; those on the Computer Science programme can choose any pair of themes, but those on specialist programmes must complete at least two themes associated with their specialism. It is the choice of these themes that characterises the specialist programmes. The Programme Structure section below indicates the Themes for this group of programmes and the tables in that section show the Theme for each course unit.

All students undertake an individual 3rd year project, supervised by a member of academic staff, which usually involves the development of significant software or hardware product. Assessment of this unit involves presentations of plans and results and a major written report.

Assessment in almost all units is a combination of lab/coursework and examination.

Students from a related Honours School can transfer into MEng and MEng with IE programmes at the end of first or (second) year provided required options have been taken, a minimum 2.1 standard attained and a suitable industrial summer placement has been obtained. Students registering in 2012 onwards who have more than 20 compensated credits, in any year of study, cannot transfer onto an MEng programme.

Students who fail to reach 2(i) (60%) standard or who do not pass at the first attempt will normally be required to transfer to the 3 year programme. In addition, students registering in 2012 onwards who have more than 20 credits in the range 30-39% will normally be required to transfer to the 3 year programme.

Programme structure

If you wish to take an external unit which is not listed on your programme course unit list (such as, for example, from University College) you must get permission from your Year Tutor. This applies for every year of your programme. If your choices do not meet the School’s course unit and theme requirements you will be contacted and be required to change your choices.

Level 1 - compulsory units
All of the units in this pool are mandatory.

Level 2 options
You have 70 credits of compulsory course units listed in the table "compulsory units" below.

Out of the remaining 50 credits of free choice:

You must choose at least 30 credits of optional COMP course units - maximum 20 from "option pool 1" below and of maximum 30 from "option pool 2" below. The minimum number of credits selected from both "option pool 1" and "option pool 2" is 30, the maximum is 50 credits.

You can also choose up to 20 credits of optional course units that are external to the Department. You can choose any Level 1 or 2 options for which you meet any pre-requisites and fits with your timetable, these may be:

- Business and Management course units: https://ughandbook.portals.mbs.ac.uk/Non-AllianceMBSstudents.aspx
- University College course units
- Language course units: https://www.languagecentre.manchester.ac.uk/learn-a-language/courses-for-students/

Please note: to enrol on some external course units (such as Language) will require permission from the associated School/Department.

To select any external course units outside of the list given above will require permission from the 2nd Year Tutor, Duncan Hull.

You must ensure your credits are balanced over the academic year (60 credits in each semester).

This programme requires 2 themes to be completed from the following list.

- Agile Methods (COMP23311, COMP23412 & COMP33711)
- Rigorous Development (COMP21111)
- Software Engineering (COMP23311, COMP23412 & COMP33511)

Level 2 - compulsory units
All of the units in this pool are mandatory.

Level 3 options

You have 60 credits of compulsory course units listed in the table "compulsory units" below.

Out of the remaining 60 credits of free choice:

You must choose 60 credits of optional COMP course units from option pool 1 - 3 below. Maximum 30 from "option pool 1", maximum 30 from "option pool 2" and maximum 20 from "option pool 3".

You must ensure your credits are balanced over the academic year (60 credits in each semester).

This programme requires 2 themes to be completed from the following list.

* Agile Methods (COMP23311, COMP23412 & COMP33711)
* Rigorous Development (COMP21111)
* Software Engineering (COMP23311, COMP23412 & COMP33511)

Level 3 - compulsory units

All of the units in this pool are mandatory.
# Level 3 - option pool 1

From this option pool choose a maximum of 30 credits and a minimum of 20 credits.

# Level 3 - option pool 3

From this option pool choose a maximum of 40 credits and a minimum of 0 credits.

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
<th>Theme</th>
</tr>
</thead>
<tbody>
<tr>
<td>COMP34120</td>
<td>AI and Games</td>
<td>20</td>
<td>Learning and Search in Artificial Intelligence</td>
</tr>
<tr>
<td>COMP38120</td>
<td>Documents, Services and Data on the Web</td>
<td>20</td>
<td>Web and Distributed Systems</td>
</tr>
</tbody>
</table>

You should aim to do 45 or 60 credits in each of semester 1 and semester 2.

Pools 1 to 4 map to periods 1 to 4 in the PGT timetable. You must pick exactly one module from Pool 5 avoiding timetable clashes.

Mandatory units - 40 credits
Optional units - 90 credits (6 course units)

# Level 4 - compulsory units

All of the units in this pool are mandatory.

<table>

Mechanisms for programme revision

Course units are reviewed annually by the Undergraduate Committee, as part of the Annual Review process, taking into account the results and comments from Course Unit Evaluation Questionnaires. Input is also received from the Teaching Assessment Panel, which has a responsibility for monitoring teaching quality in the School.

Programmes have been reviewed regularly by groups created specifically for this purpose; the last major review resulted in a new programme portfolio design which started in the first year in 2008-9. The responsibility for leadership of programme review is now in the hands of the Director of Teaching Strategy (currently Dr Steve Pettifer) who chairs a School Teaching Strategy Committee.
